2017 Consumer Confidence Report

Water System Name: NORTH GUALALA WATER COMPANY Report Date: 04.19.2018

We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 - December 31, 2017 and may include earlier monitoring data.

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo ó hable con alguien que lo entienda bien.

Type of water source(s) in use: Wells & Surface Sources

Name & general location of source(s): Wells #4 & #5 at ELK PRAIRIE

Big Gulch & Robinson Gulch at PACIFIC WOODS ROAD

Drinking Water Source Assessment information: There have been no contaminants detected in the water supply. However, the sources are still considered vulnerable to contaminations due to activities located near the drinking water sources.

Time and place of regularly scheduled board meetings for public participation:

NGWC has no set regular meetings
but questions and comments are always welcome and entertained. Call the number below or visit the office at
38958 Cypress Way in Gualala, CA.

For more information, contact: **David Bower** Phone: (707) 884-3579

TERMS USED IN THIS REPORT

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (U.S. EPA).

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Primary Drinking Water Standards (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Variances and Exemptions: State Board permission to exceed an MCL or not comply with a treatment technique under certain conditions.

Level 1 Assessment: A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment: A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an *E. coli* MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

ND: not detectable at testing limit

ppm: parts per million or milligrams per liter (mg/L)

ppb: parts per billion or micrograms per liter (µg/L)

ppt: parts per trillion or nanograms per liter (ng/L)

ppq: parts per quadrillion or picogram per liter (pg/L)

pCi/L: picocuries per liter (a measure of radiation)

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- · Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can
 also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. EPA and the State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Tables 1, 2, 3, 4, 5, and 6 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old. Any violation of an AL, MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

SWS CCR Form Revised January 2018

Consumer Confidence Report Page 2 of								
TABLE 1	TABLE 1 – SAMPLING RESULTS SHOWING THE DETECTION OF COLIFORM BACTERIA							TERIA
Microbiological Contaminants (complete if bacteria detected)	Highest No Detection		of Months Violation	MCL			MCLG	Typical Source of Bacteria
Total Coliform Bacteria (state Total Coliform Rule)	0		0	1 positive monthly sample		0	Naturally present in the environment	
Fecal Coliform or <i>E. coli</i> (state Total Coliform Rule)	0		0	A routine sample and a repeat sample are total coliform positive, and one of these is also fecal coliform or <i>E. coli</i> positive			0	Human and animal fecal waste
E. coli (federal Revised Total Coliform Rule)	0		0	(a)		0	Human and animal fecal waste	
(a) Routine and repeat samples are sample or system fails to analyze to					stem fail	s to take repeat	samples followin	g E. coli-positive routine
TABLE	2 – SAMPI	LING RES	ULTS SHO	WING THE I	ETEC'	TION OF LE	AD AND COL	PPER
Lead and Copper (complete if lead or copper detected in the last sample set)	Sample Date	No. of Samples Collected	90 th Percentile Level Detected	No. Sites Exceeding AL	AL	PHG	No. of Schools Requesting Lead Sampling	Typical Source of Contaminant
Lead (ppb)	5/14/15	10	.02	0	15	0.2	Not applicable	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits
Copper (ppb)	5/14/15	10	.81	0	1.3	0.3	Not applicable	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives

TABLE 3 – SAMPLING RESULTS FOR SODIUM AND HARDNESS							
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant	
Sodium (ppm)	9/28/17	19.5	13.0-20.0	none	none	Salt present in the water and is generally naturally occurring	
Hardness (ppm)	9/28/17	140.0	94.0-151.0	none	none	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are usually naturally occurring	

						naturally occurring
TABLE 4 – DETECTION OF CONTAMINANTS WITH A <u>PRIMARY</u> DRINKING WATER STANDARD						
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant
Aluminum (ppm)	9/28/17	.054	.054	1	0.6	Erosion of natural deposits; residue from some surface water treatment process.
Antimony (ppb)	09/28/17	.6	< 0.6	6	1	Discharge from petroleum refineries; fire retardants; ceramics; electronics; solder
Arsenic (ppb)	09/28/17	.002	< 0.002	10	0.004	Erosion of natural deposits; runoff from orchards; glass and electronics production wastes.
Asbestos (MFL)	Various	000	000	7	7	Internal corrosion of asbestos cement water mains; erosion of natural deposits.
Barium (ppm)	09/28/17	.100	< 0.100	1	2	Discharge of oil drilling waste s and from metal refineries; erosion of natural deposits.
Beryllium (ppb)	09/28/17	.1	< 0.1	4	1	Discharge from metal refineries, coal-burning factories, and electrical, aerospace and defense industries
Cadmium (ppb)	09/28/17	.001	< 0.001	5	0.04	Internal corrosion of galvanized pipes; erosion of natural deposits; discharge from electroplating and industrial chemical factories, and metal refineries; runoff from waste batteries and paints.
Chromium (ppb)	09/28/17	10	< 10	50	(100)	Discharge from steel & pulp mills & chrome plating; erosion of natural deposits.
Fluoride (ppm)	09/28/17	.11	< 0.11	2.0	1	Erosion of natural deposits; water additive that promotes strong teeth; discharge from fertilizer and aluminum factories.
Mercury (inorganic)(ppb)	09/28/17	1	< 1	2	1.2	Erosion of natural deposits; discharge from refineries & factories; runoff from landfills and cropland.
Nickel (ppb)	09/28/17	10	< 10	100	12	Erosion of natural deposits; discharge from metal factories.
Perchlorate (ppb)	09/28/17	ND	ND	6	1	Perchlorate is an inorganic chemical used in solid rocket propellant, fireworks, explosives, flares, matches, and a variety of industries. It usually gets into drinking water as a result of environmental contamination from historic aerospace or other industrial operations that used or use, store, or dispose of perchlorate and its salts.
Selenium (ppb)	09/28/17	5	< 5	50	30	Discharge from petroleum, glass and metal refineries; erosion of natural deposits; discharge from mines and chemical manufacturers; runoff from livestock lots (feed additives.
Thallium (ppb)	09/28/17	.01	< 0.01	2	0.1	Leaching from ore-processing sites; discharge from electronics, glass and drug factories.
Nitrate (as N) (ppm)	09/28/17	4	< 4	10	10	Runoff and leaching from fertilizer use; leaching from septic tanks and sewerage; erosion of natural deposits.

TARLE 5 _ DETECTION OF CONTA	MINANTS WITH A SECONI	DARY DRINKING WATER STANDARD
	\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\	JANI DRIMKIMI WALIKOJAMDAKD

			i.	1		I
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Color (CU)	09/28/17	< 5	< 5	15		Naturally occurring organic materials
Foaming Agents (MBAS) (ppb)	09/28/17	.005	< .005	500		Municipal & industrial discharges
Iron (ppb)	09/28/17	100	< 100	300		Leaching from natural deposits; industrial wastes
Manganese (ppb)	09/28/17	20	< 20	50		Leaching from natural deposits
Methyl-tert-butyl ether (MTBE) (ppb)	01/13/15	3	< 3	5		Leaking underground storage tanks; discharge from petroleum and chemical factories
Odor-Threshold (TON)	09/28/17	1	< 1	3		Naturally occurring organic materials
Silver (ppb)	09/28/17	10	< 10	100		Industrial discharges
Turbidity (NTU)	09/28/17	0.66	0.10-1.90	5		Soil runoff
Zinc (ppm)	09/28/17	.50	<.50	5		Runoff/leaching from natural deposits; industrial wastes
Total Dissolved Solids (TDS) (ppm)	09/28/17	175	160-210	1000		Runoff/leaching from natural deposits
Specific Conductance (uMHO)	09/28/17	295	250-360	1600		Substances that form ions when in water; sea water influence
Chloride (ppm)	09/28/17	16.18	6.7-26.0	500		Runoff/Leaching from natural deposits; sea water influence
Sulfate (ppm)	09/28/17	11.20	6.70-18.0	500		Runoff/Leaching from natural deposits; industrial wastes

⁽a) There are no PHGs, MCLGs, or mandatory standard health effects language for these constituents because Secondary MCLs are set on the basis of aesthetics.

TABLE 6 – DETECTION OF UNREGULATED CONTAMINANTS								
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	Notification Level	Health Effects Language			
TTHMs [Total Trihalomethanes] (ppb)	Quarterly	26.28	26.11-26.11	80 (MCL)	Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience liver, kidney, or central nervous system problems, and may have an increased risk of getting cancer.			
Haloacetic Acids (ppb)	Quarterly	6.48	6.30-6.65	60 (MCL)	Some people who drink water containing haloacetic acids in excess of the MCL over many years may have an increased risk of getting cancer.			

Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Lead-Specific Language for Community Water Systems: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. North Gualala Water Company is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. [Optional: If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants.] If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (1-800-426-4701) or at http://www.epa.gov/lead.

SWS CCR Form Revised January 2018

For Water Systems Providing Groundwater as a Source of Drinking Water

TABLE 7 – SAMPLING RESULTS SHOWING FECAL INDICATOR-POSITIVE GROUNDWATER SOURCE SAMPLES						
Microbiological Contaminants (complete if fecal-indicator detected)	Total No. of Detections	Sample Dates (MCLC) Typical Source of Cou				
E. coli	0	Once every month	0	(0)	Human and animal fecal waste	
Enterococci	0	Once every month	TT	n/a	Human and animal fecal waste	
Coliphage	0	Once every month	TT	n/a	Human and animal fecal waste	

Summary Information for Fecal Indicator-Positive Groundwater Source Samples, Uncorrected Significant Deficiencies, or Groundwater TT

SPECIAL	SPECIAL NOTICE OF FECAL INDICATOR-POSITIVE GROUNDWATER SOURCE SAMPLE							
	N/A —							
	SPECIAL NOTICE FOR UNCORRECTED SIGNIFICANT DEFICIENCIES							
	VIOLATION OF GROUNDWATER TT							
TT Violation	TT Violation Explanation Duration Actions Taken to Correct the Violation Language							
		N/A						

For Systems Providing Surface Water as a Source of Drinking Water

TABLE 8 - SAMPLING RESULTS SHOWING TREATMENT OF SURFACE WATER SOURCES				
Treatment Technique ^(a) (Type of approved filtration technology used)	ALTERNATIVE TECHNOLOGY			
	Turbidity of the filtered water must:			
Turbidity Performance Standards (b) (that must be met through the water treatment process)	1 – Be less than or equal to 0.3 NTU in 95% of measurements in a month.			
	2 – Not exceed 1.0 NTU for more than eight consecutive hours.			
	3 – Not exceed 3.0 NTU at any time.			
Lowest monthly percentage of samples that met Turbidity Performance Standard No. 1.	100			
Highest single turbidity measurement during the year	1.90			
Number of violations of any surface water treatment requirements	0			

- (a) A required process intended to reduce the level of a contaminant in drinking water.
- (b) Turbidity (measured in NTU) is a measurement of the cloudiness of water and is a good indicator of water quality and filtration performance. Turbidity results which meet performance standards are considered to be in compliance with filtration requirements.
